

Contact Tracing Programs

As the country considers options and preparedness to reopen our economic, social and cultural systems, an army of contact tracers and epidemiologic specialists will be required to document, map and advise on the spread of Covid-19. States are taking different approaches based on their abilities to resource and staff the huge volume of roles that need to be filled.

In addition to a massive recruitment, screening, and hiring effort, states are tasked with managing an increased workforce, establishing management and operational structures to support these staff and identifying training, monitoring and evaluation programs to ensure that the programs remain effective as they scale.

COPE Health Solutions can help organizations develop and deploy a contact tracing program. Our firm has a rich history of partnering with health systems, payors and states across the country to solve large-scale problems for more than 20 years. We are known for our expertise, rapid start-up, side-by-side implementation and operations commitment and success in achieving measurable outcomes.

HOW COPE HEALTH SOLUTION CAN HELP

Hands-on experience in contact tracing, with clients in California and Texas

Rapid start-up program management capabilities with internal advisory expertise in contact tracing, infectious disease, workforce management and other related areas

Expertise in managing large health care workforces engaged in similar efforts across expansive geographies, including more than 5,500 people integrated with care teams at some of the largest health systems in the country, including Kaiser Permanente, Common Spirit, Adventist Health and Providence Health & Services/Providence St. Joseph Medical Center

National firm with experts on the ground across the country who have deep expertise with payors and all types of providers in various care settings

Access to a trained, multilingual (49 languages) workforce of thousands of current and former health sector students and workers

Contract Tracing Engagement: University of Texas Rio Grande Valley (UTRGV)

Recently our firm has partnered with the UTRGV in its state-sponsored effort to hire and deploy over 200 contact tracers across the state over the next few months.

- The state of Texas has contracted with three universities to support the immediate staffing needs – either through hiring or redeployment of their existing workforce
- COPE Health Solutions will support the identification of applicant pools and program resources to scale and sustain the contact tracing effort in Texas
- The expected workforce will represent the diverse cultural and linguistic makeup of the state
- COPE Health Solutions experts on engagement include: Dr. Shira Shafir, UCLA Fielding School of Public Health, who is leading the creation of UCLA's contact tracing program for the state of California with nearly 10,000 tracers
